Hospital DDD: Pharmacy Count

	1km		2km		3km	
	id+year	prov-year	id+year	prov-year	id+year	prov-year
Public $\times$ Post	-0.403* (0.192)	-0.343* (0.158)	-1.272** (0.491)	-0.773 (0.403)	-2.148* (0.856)	-0.819 (0.724)
Post policy	1.081*** (0.148)		4.171*** (0.430)		8.757*** (0.814)	
Hospital FE	Yes	Yes	Yes	Yes	Yes	Yes
Year FE	Yes	No	Yes	No	Yes	No
Province-year FE	No	Yes	No	Yes	No	Yes
NTL control	Yes	Yes	Yes	Yes	Yes	Yes
N	164,674	164,663	164,674	164,663	164,674	164,663
R ²	0.895	0.906	0.906	0.918	0.911	0.922

Notes: Standard errors are clustered at the county level. * $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$.

Hospital Results Across Outcome Models

	Count OLS			Log OLS			PPML Count		
	1km	2km	3km	1km	2km	3km	1km	2km	3km
Public $\times$ Post	-0.343* (0.158)	-0.773 (0.403)	-0.819 (0.724)	-0.010 (0.015)	0.014 (0.015)	0.000 (0.015)	-0.036* (0.015)	-0.029* (0.013)	-0.027* (0.012)
Hospital FE	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Province-year FE	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
NTL control	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
N	164,663	164,663	164,663	134,776	146,998	151,432	147,711	156,544	159,753

Notes: Count OLS and log OLS use hospital FE and province-year FE. PPML coefficients are semi-elasticity style estimates.

Hospital Extensive Margin

	1km	2km	3km
Public $\times$ Post	-0.002 (0.007)	-0.007 (0.007)	-0.008 (0.006)
NTL	0.037*** (0.006)	0.052*** (0.007)	0.058*** (0.008)
Hospital FE	Yes	Yes	Yes
Province-year FE	Yes	Yes	Yes
N	164,663	164,663	164,663
R ²	0.803	0.773	0.741

Outcome is an indicator for having at least one pharmacy within the distance band.

Hospital Parallel Trends: TWFE Event Study

Event-time coefficients are interactions between public hospitals and relative reform years. Relative year -1 is omitted.

Hospital Parallel Trends: CSDID Event Study

CSDID treats public hospitals in their local reform year and codes non-public hospitals as never treated.

County TWFE DID: Pharmacy Count

	FE	+ controls	+ prov-year	2012–2020 no road
Post policy	7.652*** (1.474)	5.449*** (1.454)	5.188*** (1.493)	5.396** (1.669)
County FE	Yes	Yes	Yes	Yes
Year FE	Yes	Yes	No	No
Province-year FE	No	No	Yes	Yes
Controls	No	Yes	Yes	Yes
N	16,961	16,961	16,961	19,496
R ²	0.824	0.845	0.872	0.877

Controls include log population, log nighttime lights, and road density when available.

County Results Across Outcome Models

	Annual Change		Log Count		Has Pharmacy		PPML Count	
	FE	prov-year	FE	prov-year	FE	prov-year	FE	prov-year
Post policy	19.892*** (2.124)	19.090*** (2.123)	0.020 (0.014)	0.026 (0.016)	0.030*** (0.004)	0.025*** (0.005)	-0.014 (0.012)	-0.014 (0.015)
County FE	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Province-year FE	No	Yes	No	Yes	No	Yes	No	Yes
Controls	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
N	14,279	14,279	15,469	15,464	16,961	16,961	16,947	16,929

Outcome models use the controlled county sample. PPML keeps zero-count observations but yields coefficients on a different scale.

County Parallel Trends: TWFE Event Study

Panels show pharmacy count, annual change in pharmacy count, and log pharmacy count.

County Parallel Trends: CSDID Event Study

CSDID uses not-yet-treated counties as controls.

How the Results Connect

- ▶ **Hospital-level estimates are mostly negative or close to zero.** The count OLS and PPML specifications imply fewer pharmacies around public hospitals after reform relative to non-public hospitals, while log and extensive-margin estimates are close to zero.
- ▶ **County-level TWFE estimates are positive in levels.** Reform exposure is associated with higher county pharmacy counts and larger annual increases, with stable positive signs after adding controls and province-year fixed effects.
- ▶ **Scale matters for interpretation.** Hospital results compare public and non-public hospitals within local reform timing, while county results compare county-level pharmacy supply before and after reform adoption.
- ▶ **Dynamic diagnostics are mixed.** TWFE/CSDID event-study figures should be read together with the static coefficients; pre-period deviations weaken a clean causal interpretation when visible.
- ▶ **Overall pattern.** The reform appears to coincide with broader county-level pharmacy expansion, but the hospital-level DDD estimates do not show relative pharmacy entry concentrated around public hospitals.
